

Titanium Dioxide (Bright White Cement Colorant)

E-Z INSTRUCTIONS:

1. Add E-Z Patch® Titanium Dioxide gradually to your dry cement repair mixture until desired brighter white or lighter color is achieved.
2. E-Z Patch® Titanium Dioxide is concentrated so add small amounts at first.
3. As you would do with cement dye, add some into your dry cement repair mixture and mix thoroughly.
4. Take out a small amount and mix with water to compare to existing area to be repaired.
5. Remember to match repair material color to existing area to be repaired when both are wet.
6. Repeat the process until the cement repair mixture matches the existing area to be repaired.

E-Z ANSWERS to some Frequently Asked Questions

- **Product comes in dry powder form**
- **Product is concentrated bright white so only use a little at a time**
